

CASA MARIN

D.O. LO ABARCA, CHILE

SUSTAINABILITY POLICY

Viña Casa Marín is a leading vineyard in the production of cool climate, high quality wines in which the main characteristic reflects the passion which can be observed in all their production lines.

This passion which we put into our wines entails a commitment to the application of good environmental and social practices, which forces us to move towards an increasingly sustainable wine production, regarding workers, suppliers, customers, consumers and communities.

For this reason, Viña Casa Marín defines its Sustainability Policy, committing itself to:

1. Preserving the water underground and on the surface without pollutants, something very necessary but extremely scarce in this area
2. Developing a working environment which is fair, safe and healthy, promoting good practices and a good work climate
3. Collaborating the development of our communities in terms of work, social and cultural.
4. The application of integrated pest management systems in our vineyard
5. Promoting recycling, reusing and the safe disposal of both organic and inorganic waste
6. Encouraging the efficient consumption of energy and incorporating the use of renewable energies
7. Respecting the rules imposed by the code of sustainability for the wine as well as the legal requirements and commitments acquired voluntarily.
8. Comply with current legislation and responsibilities in the value chain.
9. Work with an action plan to achieve the sustainability goals established.

Viña Casa Marín's sustainability policy applies to all its business areas, including their associated companies and it is the responsibility of all company employees to comply to this.

Maria Luz Marín Spring
